Invores Systems Announces full VoiceXML 2.0 Compliance for EXpress2.0™

LONG ISLAND, NEW YORK – August 7, 2006 – Invores Systems, Inc. announces full compliance of EXpress2.0™, its software platform for, SIP telephony based, interactive applications, with the VoiceXML 2.0 Implementation Report Tests provided by the W3C Voice Browser Working Group, the standards committee for VoiceXML. EXpress 2.0™ has passed both the required and optional tests, making it one of the only platforms that have passed both suites of tests. A summary of the IR test results is posted at <http://www.invores.com/testsumm.html>. This compliance achievement validates Invores' commitment to making EXpress2.0™ the best standards driven software platform at the best price for production and development of VoiceXML applications.

"We are very pleased with the ease with which EXpress passed the required and optional tests. We have worked hard for years to ensure adherence to the VoiceXML standard" states Dan Evans, VP of Development. He continues, "This compatibility and EXpress's ability to communicate with SIP based VoIP networks and switches, it's ease of installation, stability, reliability and cost combine to make a very powerful and unique implementation of VoiceXML".

EXpress2.0™ is available directly from Invores Systems or through our partners.

About EXpress2.0™: EXpress 2.0™ is a full featured, robust, software based VoiceXML platform that is completely standards based. It is the most cost effective implementation available on the market. It is unmatched in its ease and simplicity of implementation making it an incredibly efficient and ideal platform for production, development and testing. In addition to powering diverse applications in large, medium and small businesses it is being used as the training platform for many VoiceXML training programs. The platform is a proven, stable solution that supports speech recognition, text to speech, recorded prompts and a number of other enhancements that make development of applications simpler. The administration of EXpress2.0™ is browser based. EXpress2.0™ is completely software based and exclusively uses SIP based telephony making it the most versatile implementation of VoiceXML in its ability to scale from very small to very large and to be installed in highly distributed or centralized environments. Impressively flexible, EXpress2.0™ is suitable for a wide range of environments

About Invores: Invores Systems, Inc. is a privately held Long Island, New York software development company focused on Interactive Voice Web self service solutions for commercial, service provider and government organizations. Invores Systems offers a comprehensive suite of licensed software and services designed to automate customer contact business processes over the telephone while capitalizing on existing web infrastructure and IP telephony.
