

Partnering For Success

EXpress2.0: The Soft Voice Solution That Has Everyone Talking!

Have you been looking for the ideal way to add hot, in demand speech recognition apps to your clients? Are your clients talking to someone else about voice-web technologies?

We are changing the way integrators, VARs and solutions providers like you are going to market with interactive voice-web solutions. We've made it easy to understand, demonstrate, and most of all *easy to sell*. Attractive price points will allow you to leverage the lucrative voice-web market.

EXpress2.0 is the first completely software based interactive voice solution that doesn't require any expensive, proprietary or specialized hardware. It runs on a standard Windows 2000

server (Linux coming soon!) which is connected to a gateway using SIP.

Imagine the opportunities of being able to offer your clients VoiceXML applications that integrate directly with their CRM, CTI and web strategies. With **EXpress2.0** you can bring people together with business and the web with freedom from expensive gadgets; everyone has a phone.

EXpress2.0 is a completely software based platform for customer self-service. It requires no specialized or proprietary

hardware and uses the latest in speech technologies and IP based telephony to help businesses handle calls with more freedom and flexibility than ever before.

Haven't you been looking for more ways to bring leading edge value to your clients?

Benefits of Partnering with Invores Systems:

- Extensive knowledge of Contact Center Marketplace (we are the pioneers of Voice Response)
- Extensive knowledge of speech enabled self service apps
- Software only solution that is standards based
- No need to learn or support proprietary systems
- VoiceXML application development and execution environment
- Fully integrated with SpeechWorks
- Flexible and scalable
- Price points that are attractive for even low transaction volume applications
